**DESCRIPTION**
**For explosion-hazard zones**

Solenoid coil for explosion-hazard zones. The flameproof enclosure prevents an explosion in the interior from getting outside. The design prevents a surface temperature capable of igniting. The steel housing is zinc-/nickel-coated. Optional with integrated amplifier electronics.

**FUNCTION**

In combination with an armature tube, the function of a switching solenoid or of a proportional solenoid results. Solenoid coils in AC – construction have an integrated rectifier. All cable threaded joints certified for this explosion protection class with a protection class of at least IP65 can be used. The optional amplifier electronics have an analogue interface and can be adjusted by means of push-buttons and 7 segment display or by means of the parameterisation software PASO.

**APPLICATION**

The solenoid coil is suitable for use in all explosion-hazard zones, open cast and also in mines.

This signifies, that the coils are certified for applications in zones with explosion-hazard gas, steam, vapour, air and dust mixtures of the zones 1/21 and 2/22.

Valves for explosion-hazard zones are utilised in:

- the shipping- and offshore industries
- the oil- and gas industries
- the chemical industry
- wood processing
- grain mills
- the mining application

	24 VDC				
Nominal power (W)	6	9	12	15	21
Nominal resistance (Ω)	98,5	64	49,2	38,5	27,5
Recommended rated current for fuse inserts (mA)	400	800	800	1250	2000
Limiting current (mA) (Proportional function)	200	300	370	450	600

	115 VAC				
Nominal power (W)	6	9	12	15	21
Nominal resistance (Ω)	1840	1180	869	700	500
Recommended rated current for fuse inserts (mA)	100	200	200	315	400

	230 VAC				
Nominal power (W)	6	9	12	15	21
Nominal resistance (Ω)	7280	4750	3370	2850	2050
Recommended rated current for fuse inserts (mA)	100	100	100	160	200

M272 reduces the nominal power ( $P_N$ ) after 500ms to a reduced power ( $P_R$ )

**OPERATION SECURITY**

The solenoid coil must only be put into operation, if the requirements of the operating instructions supplied are observed to their full extent.

In case of non-observance, no liability can be assumed.

A corresponding fuse in accordance with its design current has to be connected in series as short-circuit protection for every solenoid coil.

**INSTALLATION**

For stack assembly please observe the remarks in the operating instructions.

**ACCESSORIES**

– The operating instructions incl. the EC declaration of conformity for solenoid coils of the type MKY45/18x60 is supplied in German, English and French (download under [www.wandfluh.com](http://www.wandfluh.com))

– Type test certifications (download under [www.wandfluh.com](http://www.wandfluh.com))

– EC-declaration of conformity (download under [www.wandfluh.com](http://www.wandfluh.com))

– Recognition of production quality assurance

**ACCESSORIES**

USB adapter PD2  
incl. USB cable type A-B, 1,8 m  
(for parameterisation via PASO)

Article no. 726.9900

**PARAMETER SETTINGS**

The MKY electronics have push-buttons and a display which enable setting the most important parameters. In addition, the digital input can be used as a communication interface, through which, by means of the parameterisation software "PASO-PD2", the complete parameterisation and diagnostics can be carried out. For this, the Wandfluh USB-PD2 adapter is required. (not included in the delivery)

Attention: During the communication, the digital input cannot be used.

**FUNCTION DESCRIPTION**

**AMPLIFIER WITH ANALOGUE INTERFACE**
**Command value scaling**

The command value can be applied as a voltage, current, digital, frequency or PWM signal. The scaling takes place via the parameter "Interface". Furthermore, the command value can be monitored for a cable break. A dead band can also be set.

**Fixed command value**

There is 1 fixed command value available, which can be selected via the digital input. This function has to be configured before in PASO.

**Ramp generator**

Two linear ramps for up and down are available which can be adjusted separately.

**Valve type**

Adjustment possibilities: switching solenoid or proportional solenoid.

**Mode of operation „Command value unipolar/bipolar (1-Sol)**

Dependent on a command value signal (voltage, current, digital, frequency or PWM), the solenoid is driven (e.g. 0...10V correspond to 0...100 % command value, 0...+100 % command value correspond to I<sub>min</sub>...I<sub>max</sub> solenoid driver)

**Signal recording**

Furthermore, the „PD2“ amplifier electronics have a signal recording function. This, by means of PASO, enables the recording of various system signals, such as command value, solenoid current, etc., which can be represented on a common time axis.

**Solenoid driver**

A Pulse-Width-Modulated current output is available. A dither signal is superimposed, whereby the dither frequency and the dither level are separately adjustable. The minimum (I<sub>min</sub>) and maximum (I<sub>max</sub>) current can be adjusted. The solenoid output can also be configured as switching solenoid output. In this case, a power reduction can be adjusted.

**Optimisation of characteristic curve**

An adjustable characteristic curve „Command value input – solenoid current output“ enables an optimised (e.g. linearised) characteristic of the hydraulic system.

**Channel enabling**

The device is enabled as per factory setting. Via PASO or menu item, the digital input can the enabling can be set „on“, „out“ or „external“ (digital input).

**Hints:**

Digital input: if not wired, the state of the digital input is not defined  
 Analogue input: if not wired, the voltage input will read 1.11 V constantly.

**CONNECTION EXAMPLES**
**Supply voltage**

**Analogue input with potentiometer**

**Digital input as function input**

**Analogue input voltage with external voltage source**

**Analogue input current with external current source**
